

# Hear More Clearly!

Our sanctuary has a T-loop system for worshipers using hearing aids. The audio signal from all microphones is broadcast directly to your hearing aid.

## To use this system:

- 1) Make sure the t-loop coil for your hearing aid has been activated/installed by your audiologist.
- 2) If your hearing aid has a setting for telephone use, switch your device to the “T” setting. If your hearing aid does not have a “T” setting, contact your hearing aid provider for assistance.
- 3) Sit closer to the perimeter of the sanctuary where the T-loop wiring is installed and the signal tends to be stronger.

### Direct connection for the hearing impaired

An induction loop system turns hearing aids into loudspeakers, delivering sound right into the ear.

#### HOW IT WORKS

- 1 Person speaks into a microphone
- 2 Current is amplified and sent to a magnetic cable loop surrounding the listeners, creating a zone.
- 3 A magnetic field delivers the amplified, high-quality signal to the listener's hearing aid.
